2. Features and requirements

Add-on features:

- allows you to upload files to a special directory
- unpacks files in a way the add-ons are available for installation
- operates with files in the following formats: *.tar, *.zip
- supports *.tar.gz, *.tar.bz2 file formats, but your PHP must be configured to use the appropriate extensions
- the skin may have any name at the archive file, unpack process will replace any skin name with the name of currently used skin

Add-on requirements:

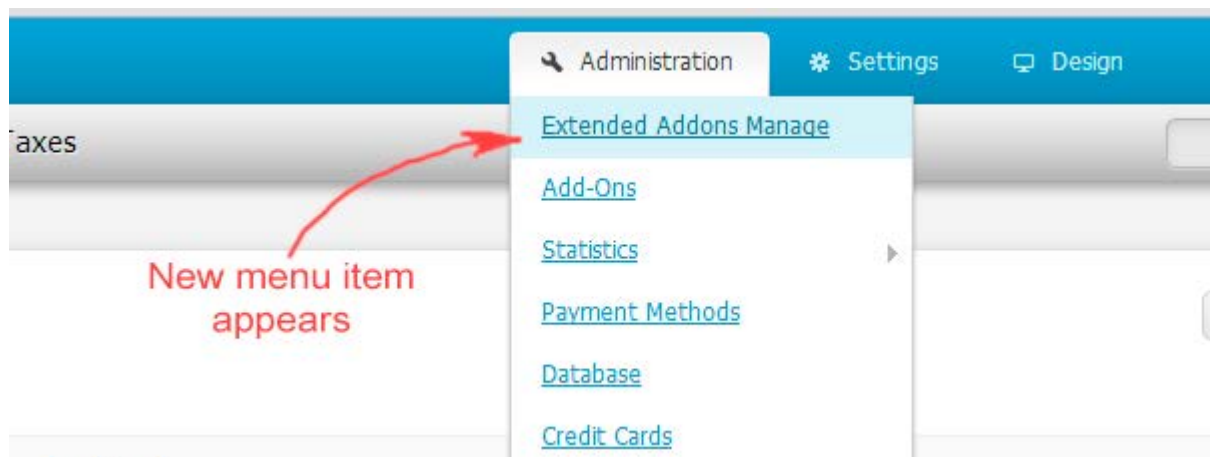

- *add-ons* and *skins* directories must be contained at the root level of the archive file. Typically add-ons are supplied in this form
- operation system user from which name web server runs must have write permissions *addons* and *skins* directories. Usually, this requirement is satisfied
- all skin parts of the store (*admin*, *customer*, *mail*) are placed at the same skin directory. Typically used skin named *basic*

3. Installation

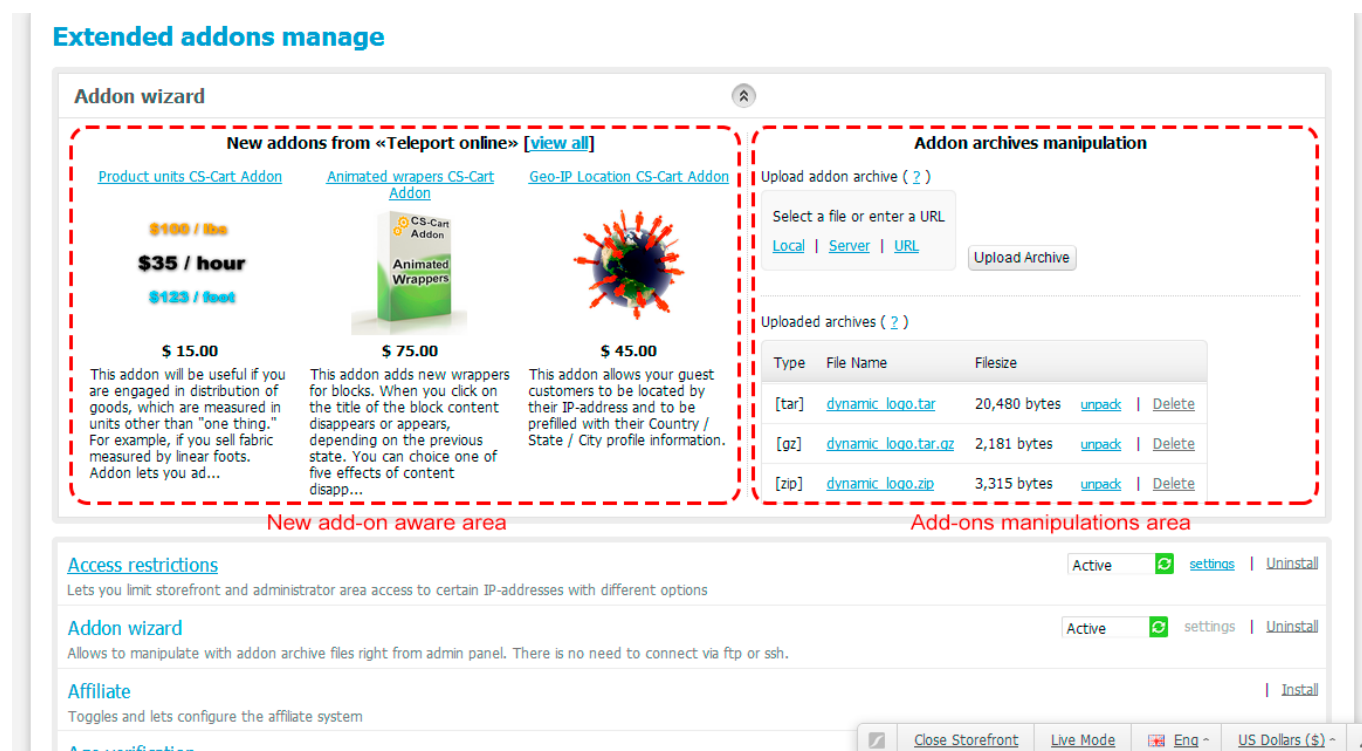

- a. Download add-on archive file.
- b. Place archive into the root directory of your web site.
- c. Unpack archive at the site root directory.
- d. Make sure that admin and customer add-on skins appear at the active skin directory. You may need to move add-ons skins from default skin directory to the active skin directory.
- e. Login to the administration panel, go to the "*Administration*" → "*Add-ons*" and click "*Install*" link next to the add-on name.

4. Usage

To reach to the add-on interface choose “*Extended Addons Manage*” menu item under the “*Administration*” link.

Unlike standard “*Add-ons*” menu item, the top of “*Extended Addons Manage*” page contains additional block. The block separates into two areas: new add-ons aware area and add-ons manipulations area. The first one is announce you with the latest three add-ons made by “*Teleport online*” team. The second one is proposed to do manipulations with add-ons archive files.

Now, to perform any add-on installation procedure simple use following step:

- a. Select add-on archive file to be uploaded on the server by the links “Local”, “Server” or “URL” at the Add-ons manipulation area.
- b. After add-on archive chosen click “Upload Archive” button and add-on archive file appears at the list under “Uploaded archives” header.

Note: Only *.tar, *.zip, *.tgz, *.gz and *.bz2 file extensions allowed.

- c. Click “Unpack” link next to the archive file name and add-on appears at the add-ons list below.

Note: If your archive file has not appropriate file structure it does not appear at the add-ons list. Check chapter “2. Features and requirements” for more detail.

- d. Finally, operate with just unpacked add-on in a standard way: install it, configure and uninstall.
- e. If you don't need in add-on archive file any more, just click “Delete” link next to the add-on archive file name.
